

Dear Naperville Resident,

Construction of the West Street Garden Plots northern expansion and improvements project is underway. The project primarily includes site clearing, grading, drainage improvements, and water system installation in the northern plots. Overall, the project will result in approximately 476 garden plots and 4 ADA plots located in the northern portion of the West Street Garden Plots area.

A portion of the project includes the installation of 4 water spigots in the expansion areas of the northern plots. The 4 water spigots will be removed from the southern garden plots area in order for the equipment to be re-used within the northern plots. In addition, drainage improvements will be made to the northern garden plots which require the addition of topsoil. The topsoil that is needed will be removed from the southern garden plots for use within the northern gardening areas. Relocation of topsoil is expected within the next several weeks.

Please share this information with anyone that may not be part of the Park District's garden plot e-mail database. Updates will continue to be provided via email and on the Park District's website as new information becomes available.

Sincerely,
Naperville Park District
